The following is an example of a single year search for papers containing the words best or practices, sorted by relevance

Search tips:

1. Phrases not in quotes will find documents with any of the words searched.
Example: Search for *best practices* finds all documents with the word "best" or the word "practices," or both contained in the text.

2. Use quotes to search for an exact phrase.
Example: Search for *"best practices"* finds only documents containing the phrase "best practices".

3. Words and names require exact spelling.
Example: Search for *"best practices"* finds different documents than a search for "best practice".

4. The use of wildcards (asterisks) or Boolean operators (AND, OR, NOT) are not supported.

5. Selecting years to search: The default is all years if you do not select a specific year or years to search.

Match score: The higher the match score, the more times these words are found.

Select papers, posters or all submissions.

Then select years
